

# West Dorset

This profile gives a picture of health in this area. It is designed to help local government and health services improve people's health and reduce health inequalities.

Health Profiles are produced every year by the Association of Public Health Observatories.

Visit the Health Profiles website to:

- see profiles for other areas
- use interactive maps
- find more detailed information

## West Dorset at a glance

- The health of people in West Dorset is generally good. West Dorset has low levels of deprivation when compared to England as a whole. Life expectancy for men and women is above the England average.
- There are inequalities within West Dorset. Women in the most deprived areas live almost 5 years less than women in the least deprived areas.
- The early death rates from heart disease and stroke and from cancer are better than the England average.
- Estimated rates of smoking, healthy eating and obesity in adults are better than the England average.
- The percentage of women smoking in pregnancy is worse than the England average with almost 1 in 5 smoking whilst pregnant. The rate of breastfeeding initiation is better than for England as a whole.
- The proportion of children who take part in at least 3 hours of school sport a week is better than the England average, as is the proportion of Reception year children who are classified as obese.
- The rate of malignant melanoma skin cancer is worse than the England average.
- The Dorset Local Area Agreement has prioritised tackling levels of physical activity, smoking and tobacco control, healthy weight, alcohol misuse and teenage pregnancy.
- For further information, refer to the Annual Public Health Report at [www.dorset-pct.nhs.uk](http://www.dorset-pct.nhs.uk) or [www.dorsetforyou.com](http://www.dorsetforyou.com)

## Deprivation: a national view

This map shows differences in deprivation levels in this area based on national quintiles (of the Index of Multiple Deprivation 2007 by Lower Super Output Area). The darkest coloured areas are some of the most deprived areas in England.

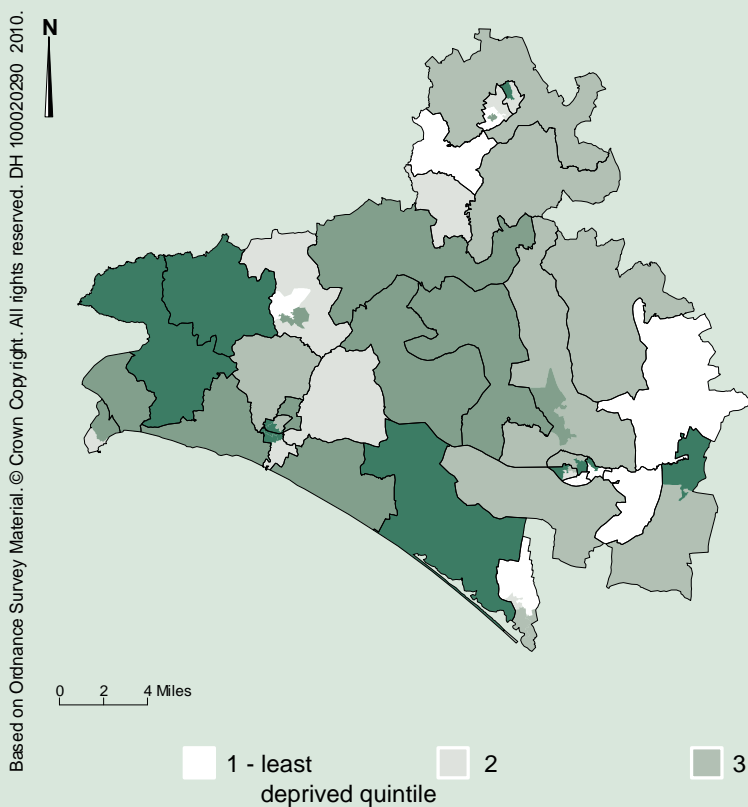

This chart shows the percentage of the population in England, this region, and this area who live in each of these quintiles.

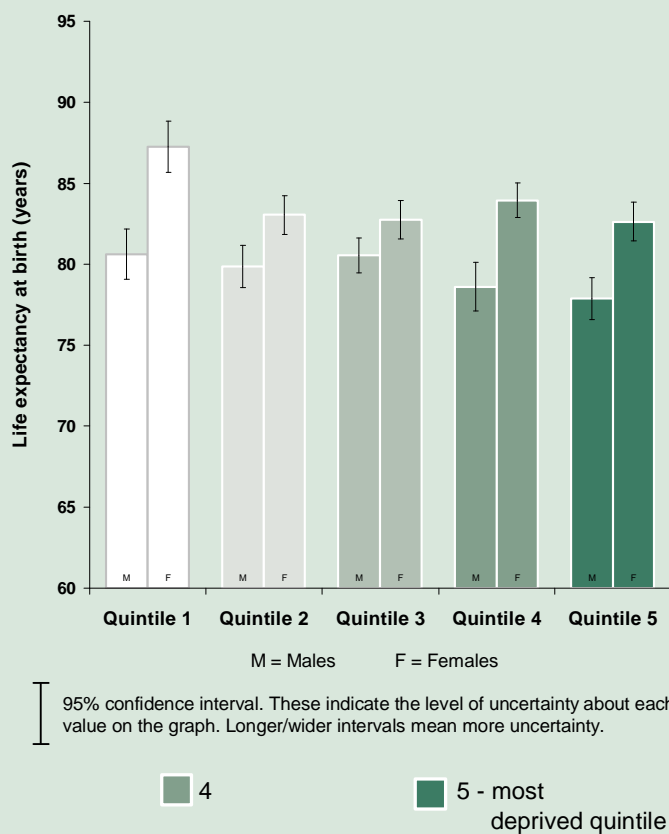

## Health inequalities: a local view

This map shows differences in deprivation levels in this area based on local quintiles (of the Index of Multiple Deprivation 2007 by Lower Super Output Area). The darkest coloured areas are the most deprived in this area.

This chart shows the life expectancy at birth for males and females (2004-2008) for each of the quintiles in this area.

## Health inequalities: changes over time

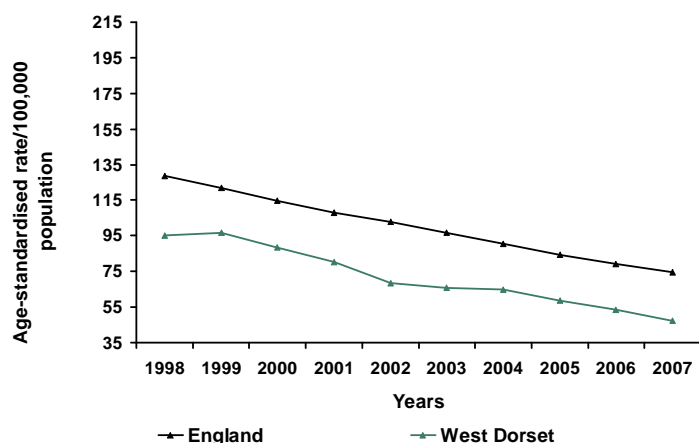

These graphs show how changes in death rates for this area compare with changes for the whole of England. Data points on the graph are mid-points of 3-year averages of yearly rates. For example the dot labelled 2003 represents the 3-year period 2002 to 2004.

Trend 1 compares rates of death, at all ages and from all causes, in this area with those for England.

Trend 2 compares rates of early death from heart disease and stroke (in people under 75) in this area with those for England.

Trend 3 compares rates of early death from cancer (in people under 75) in this area with those for England.

### Trend 2: Early death rates from heart disease and stroke

### Trend 1: All age, all cause mortality

### Trend 3: Early death rates from cancer

## Health inequalities: ethnicity

This chart shows the percentage of pupils by ethnic group in this area who achieved five GCSEs in 2008/09 (A\* to C grades including English and Maths). Comparing results may help find possible inequalities between ethnic groups.

Legend:  
■ England  
■ West Dorset

Ethnic Groups	% pupils achieved grades	No. of pupils achieved grades
White	65.5	863
Mixed	65.2	15
Asian		
Black		
Chinese/other		

If there are any empty cells in the table this is because data has not been presented where the calculation involved pupil numbers of 0, 1 or 2. Some further groups may not have data presented in order to prevent counts of small numbers being calculated from values for other ethnic groups or areas.

The chart below shows how the health of people in this area compares with the rest of England. This area's result for each indicator is shown as a circle. The average rate for England is shown by the red line, which is always at the centre of the chart. The range of results for all local areas in England is shown as a grey bar. A red circle means that this area is significantly worse than England for that indicator; however, a green circle may still indicate an important public health problem.

- Significantly worse than England average
- Not significantly different from England average
- Significantly better than England average
- No significance can be calculated

<sup>+</sup> In the South East Region this represents the Strategic Health Authority average

Domain	Indicator	Local No. Per Year	Local Value	Eng Avg	Eng Worst	England Range	Eng Best
Our communities	1 Deprivation	0	0.0	19.9	89.2	[Bar chart showing West Dorset significantly better than England average]	0.0
